

HOW ARE THE ADDRESSES PROCESSED?

The strength of WAMAS is the comprehensive address location database that is corrected and maintained by a broad, qualified community of users.

WAMAS uses a variety of reliable data sources to make this happen.

HOW CUSTOMERS ARE USING WAMAS

Standardizes and formats addresses correctly for mailing (CASS certified).

Determines **associated geography for an address** including X,Y coordinates, watershed, zipcode, legislative district and other identifying information associated with a corrected address.

Helps detect circumstances that may indicate exposure of vulnerable persons to sex offenders by standardizing and **linking addresses**.

Convert addresses to USPS format and x,y coordinates to validate Broadband provider service areas and claims for Broadband speeds.

GET INVOLVED! USE WAMAS TODAY!

We can help you get started. Request access by emailing the **Access Request Form** on the WAMAS website to wamas@watech.gov. What you will need:

- Static IP Address
- Address data in expected format (e.g. standardized column names)
- Determine which service you want to use (e.g. API's within an application, Excel spreadsheet, batch processing)
